

## Kemtekt 20

KEMTEKT 20 is a paint and impregnation material against humidity on brick, stone and concrete walls.

### Description:

- KEMTEKT 20 is low-viscosity, transparent silicon solution, protecting against humidity and water.

### Fields of Use:

- KEMTEKT is used to impregnate brick, stone, and concrete walls to insulate them against humidity, groundwater and prevent the rise of water through the capillary action.
- KEMTEKT is a paint of surfaces to protect them against air humidity, rains and water.

### Technical Characteristics: (at 25 ° C)

Base:	Water silicone solution
Solid Content Rate:	8 %
Density (kg/liter):	1.05 ± 0.02
pH:	11.8

### Method of Application:

- Surfaces should be cleaned well from dust and any other contaminations.
- The pack should be well stirred before use.
- Impregnate KEMTEKT 20 in walls under average pressure level of 2 – 3 air pressure with the impregnation machine through holes across the wall every 50 – 70 cm at height of 50 cm from the ground.
- Application tools should be cleaned directly after application with kerosene.

**Storage:** For 6 months under proper storing conditions.

**Packs:** 1 kg, 5 kg, 20 kg.
